Tyvek®

INDUSTRIAL PROTECTIVE CLOTHING

www.lakeland.com

Lakeland
Lakeland's Tyvek® Suits feature serged seams. A serged seam joins two pieces of material with a thread that interlocks. This is an economical stitching method for general applications. This stitching method is generally not used for chemical protective clothing. It is more commonly found on limited use clothing where dry particles are of a concern.

**Superior barrier performance!**

Competitive materials possess poor levels of barrier durability or excessive porosity, so they offer much lower barrier protection. Tyvek® delivers the best possible balance of performance you can get.

**Superior durability!**

Tyvek® is built for the long run. Lakeland protective garments made with this enhanced material hang in with a durability superior to any other limited use material. Why? The tough barrier qualities of Tyvek® are found throughout the fabric.
